Figure 1. A schematic diagram of the experimental setup. The subject is seated in a chair, viewing a video screen. The screen displays a target (a small circle) and a starting point (a larger circle). The subject's hand is positioned at the starting point. The distance between the starting point and the target is labeled as d . The subject is instructed to move their hand from the starting point to the target. The video screen is connected to a computer system, which records the hand's position and movement time.

Re-checking your figures I find that you distribute the total sum of \$340.07 out of \$340.00. Something is wrong.

Please re-check your 1/72nds and I think you will find that the figure is \$4.72 and re-check your 1/16ths and I believe you will find that they are \$21.25.

Re-adding I got \$339.96 leaving you \$.04 breakage rather than having you spend \$.07 breakage. Remittance no. 22 is Eloise Nelson Lowell.
