Figure 1

Figure 1 is a line graph showing the percentage of respondents who believe that the U.S. should take action to reduce global warming, categorized by age group (18-29, 30-49, 50-69, 70+) and education level (High School, College, Graduate). The Y-axis represents the percentage of respondents (0 to 100). The X-axis represents the percentage of respondents who believe that the U.S. should take action to reduce global warming. The legend indicates that the solid line represents 'U.S. should take action to reduce global warming' and the dashed line represents 'U.S. should not take action to reduce global warming'. The graph shows that the percentage of respondents who believe that the U.S. should take action to reduce global warming increases with age and education level. For example, 70% of respondents aged 70+ believe that the U.S. should take action to reduce global warming, compared to 50% of respondents aged 18-29. Similarly, 80% of respondents with a graduate degree believe that the U.S. should take action to reduce global warming, compared to 60% of respondents with a high school diploma.
